

# Tamilore Akinfemi

5875754646 | tamiloreakinfemi@gmail.com | [github.com/tamilorea1](https://github.com/tamilorea1)

## Education

**University of Calgary**  
*B.S in Computer Science*

Calgary, Alberta, Canada  
*Sep 2022 — Apr 2028*

## Skills

**Programming Languages:** TypeScript, JavaScript, Java, Python, SQL, C++, HTML, CSS, C#

**Frameworks & Libraries:** React.js, Redux, Node.js, Next.js, Flask, Bcrypt, NumPy, Pandas

**Developer Tools:** AWS, Git/Github, Firebase, Docker, REST APIs, Supabase, PostgreSQL

## Experience

**Data Science Intern**  
*M2M Tech*

May 2023 — Aug 2023  
*Calgary, AB*

- Spearheaded the integration of Google Maps and Census Data APIs to overhaul legacy workflows, improving data processing efficiency by 50% and saving 4 hours of daily manual labor.
- Collaborated with a 3-member team to identify bottlenecks in data workflows, and scripted custom Python solutions to streamline cleaning processes, accelerating project delivery by 25%.
- Synthesized 10,000+ geographical data points using NumPy and Pandas to identify and present key market trends to stakeholders via interactive Bokeh visualizations.
- Diagnosed and resolved data inconsistencies by establishing a standardized validation protocol, ensuring 100% accuracy for client-facing reports.

## Projects

**Fantasy Basketball League Tracker** | *Next.js, Prisma, PostgreSQL, Supabase*

- Architected the technical roadmap as lead developer of a full-stack drafting system, programmatically handling league creation and reducing manual setup time by 70%.
- Devised a high-concurrency data pipeline utilizing 30+ simultaneous API calls to seed a Supabase database, eliminating manual entry for 500+ player profiles.
- Directed the implementation of secure session management via NextAuth, tripling concurrent user capacity while establishing a standardized security protocol for the application.

**Cybersecurity Threat Analysis Dashboard** | *React.js, Firebase, CISA API*

- Implemented automated data validation checks within the data pipeline, decreasing data discrepancies by 20% and minimizing manual data correction efforts by an estimated 8 hours per week.
- Optimized cloud system performance by 60% and resolved CORS limitations through serverless Firebase Cloud Functions, collaborating with peer developers to peer-review security configurations.
- Decreased report generation time by 90% by building a scalable, schema-validated export pipeline for 500+ vulnerability records.

**BudgetPal** | *Next.js, TypeScript, Docker, Prisma, Supabase*

- Designed a real-time analytics dashboard using Recharts to interpret complex spending patterns, increasing financial data visibility for users by 40%.
- Established 100% data isolation protocols by integrating UUID-based logic and Bcrypt hashing, partnering with a testing group to verify the privacy of sensitive user credentials.
- Optimized deployment reliability by containerizing the environment with Docker, ensuring 100% consistency between local development and production stages.
