

TAMILORE AKINFEMI

5875754646 | tamiloreakinfemi@gmail.com | github.com/tamilorea1

EDUCATION

University of Calgary
B.S in Computer Science

Calgary, Alberta, Canada
Sep 2022 – Apr 2028

SKILLS

Programming Languages: TypeScript, JavaScript, Java, Python, SQL, C++, HTML, CSS, C#

Frameworks & Libraries: React.js, Node.js, Next.js, Flask, Bcrypt, NumPy, Pandas

Developer Tools: Git/Github, REST APIs

Cloud & DevOps: AWS(IAM, CloudTrail, CloudWatch, Lambda, SNS), Terraform, Docker, Firebase, Supabase

Databases: PostgreSQL, DynamoDB

EXPERIENCE

Data Science Intern
M2M Tech

May 2023 – Aug 2023
Calgary, AB

- Spearheaded the integration of Google Maps and Census Data APIs to overhaul legacy workflows, improving data processing efficiency by 50% and saving 4 hours of daily manual labor.
- Collaborated with a 3-member team to identify bottlenecks in data workflows, and scripted custom Python solutions to streamline cleaning processes, accelerating project delivery by 25%.
- Synthesized 10,000+ geographical data points using NumPy and Pandas to identify and present key market trends to stakeholders via interactive Bokeh visualizations.
- Diagnosed and resolved data inconsistencies by establishing a standardized validation protocol, ensuring 100% accuracy for client-facing reports.

PROJECTS

Honeytoken Monitor | AWS, Terraform, Node.js, TypeScript, Docker

- Architected a deception-based intrusion detection system, provisioning a full AWS security stack: IAM, CloudTrail, CloudWatch, Lambda, SNS, DynamoDB, via a single Terraform command with remote state locking.
- Engineered an event-driven detection pipeline (CloudTrail → CloudWatch → Lambda → SNS) that identifies unauthorized credential use and delivers real-time breach alerts within seconds.
- Automated incident response (SOAR) by building a Lambda-based remediation layer that deactivates compromised credentials on trigger, and extended detection coverage with a decoy HTTP trap layer and a DynamoDB-backed breach dashboard.

Fantasy Basketball League Tracker | Next.js, Prisma, PostgreSQL, Supabase

- Architected the technical roadmap as lead developer of a full-stack drafting system, programmatically handling league creation and reducing manual setup time by 70%.
- Devised a high-concurrency data pipeline utilizing 30+ simultaneous API calls to seed a Supabase database, eliminating manual entry for 500+ player profiles.
- Directed the implementation of secure session management via NextAuth, tripling concurrent user capacity while establishing a standardized security protocol for the application.

BudgetPal | Next.js, TypeScript, Docker, Prisma, Supabase

- Designed a real-time analytics dashboard using Recharts to interpret complex spending patterns, increasing financial data visibility for users by 40%.
- Established 100% data isolation protocols by integrating UUID-based logic and Bcrypt hashing, partnering with a testing group to verify the privacy of sensitive user credentials.
- Optimized deployment reliability by containerizing the environment with Docker, ensuring 100% consistency between local development and production stages.
